

Ozzie Ozefovich

Specializing in underwater videography of trout- their spawning, feeding and interactive behaviors specifically under fast moving and white water in local streams and rivers.

Born in eastern Pennsylvania, Wendell "Ozzie" Ozefovich grew up fishing the streams of the coal mining region. His passion for trout and their world began at age six, when a brook trout fell prey to a garden worm. That passion continues unabated for the salmon and trout he now pursues with fly and rod.

After serving four years in the US Navy as an electricians mate, Ozzie spent his professional career in the power generation industry, employed in the instruments and control systems field, and in the field's training and course development. His experience in teaching allows him to discuss the nuances of hydrodynamics and make them understandable.

Since retiring Ozzie has spent considerable time volunteering with the Central Jersey Trout Unlimited chapter where he serves on the Board of Directors and is the coordinator for the Trout in the Classroom program, and works with the NJ Division of Fish and Wildlife being involved with kids educational programs and stream restoration projects.

In the late 90's Ozzie combined his love of trout and his experience in lecturing with a lifelong interest in movie making. He has produced a series of underwater videos exploring how trout feed, spawn and behave. He has chronicled wild and hatchery trout in their natural environments. His narrated video presentations have opened the eyes of thousands of anglers across the country.

There are currently three DVD's -- Discovery, Feeding Lies, and Trout Vision and Refraction.

Not Just Trout, Atlantic Salmon Fishing and Trout in the Classroom for Students are available in presentation format.

This fascinating study of trout and their world is available in four stand alone presentations. Each one offers a fresh and informative view of trout and the waters they occupy.
